

Litepaper World of Iselia

World of Iselia heralds a transformative phase in the cryptocurrency sector by integrating a unique, powerful tokenomics model with the financial prowess of a hedge fund. This innovative partnership aims to generate a sustainable income stream for its users while also powering a distinct token burn mechanism. The project's design, in its novelty and effectiveness, is set to redefine the existing concepts of value and utility in the cryptocurrency landscape. This Litepaper explores the comprehensive details of World of Iselias' pioneering structure, its underlying technology, and the unprecedented opportunities it offers to its participants.

Introduction

A prevalent issue observed in many tokens currently in the market is their reliance solely on user activity and token-based revenue generation, leading to unnecessary selling pressure and gradual token devaluation over time. However, World of Iselia sets itself apart from this trend. Through our strategic partnership with a hedge fund, we have established a unique project framework that ensures immediate revenue sources beyond token-related activities. This approach allows us to allocate profits from the hedge fund towards systematic token buyback and burn, creating a continuous buying pressure while reducing the overall token supply.

What further distinguishes World of Iselia from other models is our non-inflationary staking system. Users have the opportunity to directly engage with the hedge fund and benefit from its tangible returns, receiving actual pay-outs in USDT on a quarterly basis. Thus, World of Iselia represents more than just a token; it embodies a sustainable, value-driven financial ecosystem.

Project Details

Our main goal is to raise funds for our project, with a target soft cap of \$1 million and a hard cap of \$8.088 million, to initiate the strategic collaboration with the hedge fund.

Here is an overview of our proposed fund allocation:

- 50% of the raised funds will be allocated to the hedge fund investment.
- 25% will be designated for covering operational expenses.
- The remaining 25% will be utilised to enhance the liquidity pool.

The hedge fund consistently generates monthly returns ranging from 7% to 15%. To demonstrate our sustainable business model, let's consider a scenario where we raise \$2 million, and the hedge fund contributes \$1 million to the fund.

We plan to allocate 5% of the monthly earnings (approximately \$7.5k) to conduct a gradual buyback and burn operation for the token. This approach will prevent significant sell-offs that could result from a large, one-time investment. Additionally, 2% of the earnings will be devoted to continuously growing the fund's principal.

Any remaining profits will be reinvested in the business and kept separate from the original capital to foster growth. The initial capital raised is expected to sustain the business operations for the first year.

Token Fees

Our unique fee structure sets us apart from other tokens and reinforces the burn mechanism for \$WOI. A fee of 3% is applied to both incoming and outgoing transactions. The fees collected from buying transactions are automatically transferred to a burn wallet, effectively reducing the token supply over time. Conversely, the fees derived from selling transactions are directed to a business wallet. These funds are allocated towards marketing initiatives and further development of the project. This strategic distribution of transaction fees ensures a continuous reduction of the token supply and fosters the ongoing growth and visibility of the \$WOI ecosystem.

Staking

Our staking model is specifically designed to support the project without inflating the token supply, providing users with a direct connection to the hedge fund. Users have the opportunity to stake up to five times the value of their \$WOI tokens, with expected returns ranging from 3% to 5% per month. Profits are distributed back to users' wallets on four predefined dates throughout the year. While funds will be transferred to the hedge fund on the last Friday of each month, users have the flexibility to deposit into their wallets at any time during the month. During any quarterly window, users can request a full withdrawal, which includes both their principal amount and the accrued profit for that period.

During the fund investment period, \$WOI tokens are locked. Once users receive their principal back from the fund, their tokens are unlocked.

For example, let's consider a user holding \$1000 worth of \$WOI tokens who decides to deposit the maximum amount of \$1000 into the fund. This action locks the \$1000 in \$WOI. After three months, the user receives a profit airdrop of \$150. In the next quarter, the user decides to withdraw both the principal and the profit, resulting in a total receipt of \$1150 three months later, while simultaneously unlocking the \$1000 in \$WOI tokens.

Estimated Returns from Fund

The following projection focuses solely on the returns generated from the initial raise and the profits allocated for burning, without factoring in token fees and staking.

Q1						
Initial Raise	Amount Starting in Fund	Buy Back Burn Total	Balance at 10% After Q1	Balance at 15% After Q1	Profit at 10% End of Q1	Profit at 15% End of Q1
\$1,000,000	\$500,000	\$11,250	\$665,500	\$760,438	\$54,250	\$249,188
\$3,000,000	\$1,500,000	\$33,750	\$1,996,500	\$2,281,313	\$462,750	\$747,563
\$6,000,000	\$3,000,000	\$67,500	\$3,993,000	\$4,562,625	\$925,500	\$1,495,125

Conclusion

World of Iselia has crafted an innovative project that demonstrates resilience and adaptability in both bullish and bearish market conditions. Our focus on sustainability and rewarding our dedicated token holders sets us apart in the industry.

With our carefully designed token burn strategy and staking rewards supported by external revenue, we believe World of Iselia has the potential to become a prominent player in the token landscape. Our vision is to revolutionise the tokenomics paradigm, paving the way for a new era of digital currencies.

We are excited about the future of World of Iselia and the positive impact it can make in the cryptocurrency realm. By integrating unique mechanisms and prioritising user benefits, we are confident that our project will contribute to shaping the future of decentralised finance.
